

CBX Software Partners With Lazarus Alliance for AT-101, Policy Development & Penetration Testing

PRESS RELEASE **UPDATED: MAR 18, 2017**

Global sourcing management software provider CBX Software has partnered with cyber security firm Lazarus Alliance for policy development and security testing.

Scottsdale, AZ, March 18, 2017 (Newswire.com) - [CBX Software](#), an industry-leading provider of total sourcing management software solutions, has partnered with Arizona-based cyber security firm Lazarus Alliance for security policy development, vulnerability scanning, and

penetration testing.

CBX Software provides a total sourcing management software suite encompassing product lifecycle management (PLM), global sourcing, critical path management, and supplier collaboration that empowers companies to scale, accelerate time to market, enhance product innovation, improve supplier performance, and ensure product quality and supplier compliance. The company is headquartered in Hong Kong and has over 20,000 users in 30 countries, including multinational retailers.

Lazarus Alliance currently provides At-101 SOC 2 reporting for CBX using [Continuum GRC's IT Audit Machine \(ITAM\)](#), a proprietary software package that helps organizations automate their governance, risk, and compliance efforts. The SOC 2 reporting process involves establishing specific information security protocols and procedures and putting them in writing.

“We are pleased to expand the scope of our partnership with CBX Software,” said Michael Peters, CEO of Lazarus Alliance. “By releasing an SOC 2 report, CBX has already demonstrated a commitment to proactive cyber security practices. We look forward to building on the policy work we have already done with CBX during the SOC 2

If an organization does not continually scan their network and repair or remediate security vulnerabilities, it's only a matter of time before they are hacked

reporting process and supporting the continuous evolution of those policies with ongoing penetration testing.”

Ongoing vulnerability scanning and penetration testing are crucial proactive measures in today’s cyber security environment, where new threats are emerging daily. The moment one potential attack vector is thwarted, cyber criminals discover a new one. Often, attackers will exploit not just one vulnerability in a single system, but a combination of vulnerabilities spread across an organization’s entire network.

In penetration testing, which is also known as “ethical hacking,” cyber security experts utilize multiple attack vectors and possible scenarios to “hack” an organization and uncover vulnerable systems and applications. Regular penetration testing allows organizations to stay a step ahead of cyber criminals by identifying and fixing vulnerabilities and weaknesses and anticipating and preventing future security issues. Penetration testing also helps organizations achieve and maintain industry and regulatory compliance standards such as PCI DSS, HIPAA, and SOC 2; evaluate the effectiveness of their current security policies and procedures; and maintain the trust of their user base.

“If an organization does not continually scan their network and repair or remediate security vulnerabilities, it’s only a matter of time before they are hacked,” explained Peters. “By engaging in regular penetration testing, CBX Software will be able to fix any vulnerabilities before hackers exploit them, adjust its security policies and procedures as the threat environment evolves, maintain compliance, and, most importantly, secure its own and its customers’ sensitive data.”

About Lazarus Alliance

Lazarus Alliance is a leading, independent information technology Security, Governance, Risk and Compliance (IT GRC) firm that provides IT Audit & Compliance, Risk Assessment & Management, Governance & Policies, and Cybervisor supported solutions. Founded in 2000, Lazarus Alliance is a proud veteran owned business and has been passionately on the cutting edge of IT security, risk, privacy, governance, cyberspace law and compliance leadership, innovation and services provided to the global community. With significant contributions and innovations such as the IT Audit Machine, The Policy Machine, Cybervisor, Continuum GRC, SafetyNET, the Holistic Operational Readiness Security Evaluation (HORSE Project)®, the Security Trifecta, Your Personal CXO, and other progressive initiatives, it’s no wonder that Lazarus Alliance has become a leading international name synonymous with incorruptible leadership, meaningful services, exceptional customer support and tangible innovations all specifically to prevent negative press and damage to our client's companies, their shareholders, employees and customers. Lazarus Alliance’s primary purpose is to help organizations attain, maintain, and demonstrate compliance and information security excellence, in any jurisdiction.
